

LoadSheet Method

Read the data from a file containing the components of a worksheet. This includes all the data and masked rows. A new worksheet is added to the plan containing the data. Use this command to read the file created using the "SaveSheet" method. The "SaveSheet" / "LoadSheet" methods give you a tool to quickly save and retrieve data outside of your plan.

Syntax

Rpm.**LoadSheet** *strFileName*

Example

Rpm.LoadSheet "C:\Becker Quality Solutions\TestData.pmd_sht"

A new worksheet is added containing the data read from the file "C:\Becker Quality Solutions\TestData.pmd_sht".

Input

strFileName – File spec (string, required).

Results

A new worksheet containing the components stored in the file is added to the plan. This includes the data and masked rows. This method will read the file created using the "SaveSheet" method.
